

Our particular thanks are due to Mr Carl Pforzheimer for permission to quote for the first time from Gray's 'Naturalist's Journal' from the manuscript in his possession, and to Sir John Murray for his permission to print extracts from Gray's notebook of his travels. The late F. L. Holland kindly permitted us to print for the first time the letters in his possession bearing upon the Nicoll affair. We are indebted to Mr Charles C. Auchincloss, Eton, and the Trustees of the Pierpont Morgan Library and Haverford College for permission to use letters in their possession.

Once more I have to acknowledge the help given us by members of the Advisory Committee: Messrs Chapman, Ketton-Cremer, Pottle, and Sir Owen Morshead have read the proofs and made many additions and corrections in them. Mr Allen T. Hazen's *Bibliography of Horace Walpole* has solved many bibliographical problems for us. That work and its predecessor, the *Bibliography of Strawberry Hill*, were undertaken to supplement the *Yale Edition of Horace Walpole's Correspondence*. Mr Hazen's two books set Walpolian studies upon a solid bibliographical foundation, after nearly two centuries of frequent, but not always successful, endeavours to place them there. Sir Owen Morshead and Messrs Chapman, Ketton-Cremer, Pottle, and Wilder have read and improved my Introduction, as has also Mr John Carter. A contribution of major importance has been made by Lord Waldegrave. In 1942 he turned over to me Walpole's three unpublished volumes of juvenilia. These have provided us with much of what is new in the appendix to the present correspondence.

We are much indebted to Professor William Powell Jones for reading the proofs, to Mrs Louis L. Martz for assisting Mr Bennett in the preparation of the volumes for the press, and to Professor Robert Halsband of Northwestern University for his comments on Walpole's anecdotes of Lady Mary Wortley Montagu.

Mr Lam began editing the letters to and from Gray in January 1938. His task was a particularly difficult one, for he had to try to solve the problems which had been too much for our predecessors. As recently as 1935 had appeared the Toynbee-Whibley
